ABOUT

I am currently a Analytics Engineer with experience in analyzing big data, proficient in SQL and BI tools. Additionally, I have expertise in designing and implementing Data Vault 2.0 models for enterprise data warehouses.

I am also expanding my knowledge in various data-related fields like Data Governance to advance my career. I am fully prepared to be hands-on at every step to become a skilled "Data- Head."

With the credo "Attitude is everything", I always bring enthusiasm and determination to my work.

EXPERIENCE

LPBank Securities - Analytics Engineer | Data Governance September 2025 - Now

- Designed, developed, and maintained analytics-ready data models using dbt on Amazon Redshift, transforming raw data into trusted datasets for business reporting and downstream analytics.
- Built reusable and scalable ELT pipelines following analytics engineering best practices, improving data consistency, maintainability, and model performance across financial data domains.
- Designed and implemented automated data quality validation frameworks with threshold-based monitoring and alerts, proactively detecting data anomalies and improving reporting reliability.
- Leveraged dbt to implement data governance best practices, including standardized data modeling, automated data quality testing, documentation, and lineage to improve data reliability and maintainability.
- Developed and maintained data governance policies, standards, and operational procedures, defining data quality rules, documentation standards, and governance processes to ensure consistent and trusted data assets.

Mcredit - Business Intelligence May 2024 - August 2025

- Build dashboards using Data-ink Ratio Method (focus on essential data while eliminating unnecessary elements) for Product team and Business team to monitor work performance and make decisions.
- Monitor the quality of standardized data used in reporting by building dashboards to track dimensions such as completeness, uniqueness, and validity in order to provide alerts for data issues in a timely manner. For initial data exploration, develop reusable Python scripts to quickly assess data quality before it is used for further purposes.
- Create and manage metadata (technical and business metadata) to standardize knowledge among team members and provide quick access to information for new members. Additionally, AI developers can use this metadata to train AI models more accurately.

OpenCommerce Group - Data Analyst | Analytics Engineer April 2023 - April 2024

- Ensure data pipelines (DAGs) operate stably and promptly fix issues when they arise. Transform, update, and optimize models following the star schema model to meet data usage requirements. Additionally, keep the data dictionary and business glossary up to date to ensure consistency in data information across the company.
- Monitor data quality by setting up thresholds (agreed upon with data owners) to alert potential data issues, such as uniqueness, validity, and completeness,... Build dashboards to track the overall data quality of the system.
- Build dashboards to monitor key metrics for Sales, CSM, and PM, such as Sales Performance, Churn/Retention Analysis, and Conversion Rate (CR) Analysis,... Collaborate with other teams (Sales, CSM, Marketing, etc.) to set OKRs and goals for quarterly activities.

- Analyze proactively or upon request from the business department to provide timely solutions for company challenges, such as identifying causes of declining product conversion rates or optimizing customer segmentation, etc.

One Mount Distribution - Supply Chain Solution (Intern)

September 2022 - March 2023

- Learn to effectively use SQL and Power BI to support team members in transforming data and building reports related to the logistics domain (supply, demand, warehouse).
- Support team lead by preparing documentation about fundamental knowledge related to SQL and Power BI for training team members on technical skills and effectively utilizing the developed dashboards.

SKILL

Code

SQL (BigQuery, Redshift)
Python

BI tool

PowerBI
Holistics

Soft Skills

English communication
Presentation

EDUCATION & CERTIFICATE

Education

University: National Economics University (Bachelor's degree)
Major: E-BBA (Bachelors of Business Administration in English)
Classification: Distinction

Certificate

Google Data Analytics
IELTS - 7.0
